Trading Unit	1	

#### SEMOpx Registration – Things to note

#### **Registration Timelines**

- On receipt of your registration pack, it can take up to **60 working days** to make the new Party, Participant and Unit and Users effective in the Balancing Market Interface and the Member, Unit, Users and Traders in **SEMOpx Platforms** (ETS & M7)
- Addition of New Members: requires 10 working days to implement in the systems after admission confirmed, and must be effective on a Wednesday.
- Addition of New Units: requires 5 working days to implement in the systems after admission confirmed, and must be effective on a Wednesday.
- For other changes to setup: e.g. New Users, Traders, change in ACER code, Trade Recall contact change, IT contact change, typically requires 5 working days to implement in the systems after approved, but may be facilitated in short timeframes (dependent on volumes)

#### **Users vs Traders**

- User is the actual user name and password to log into ETS, or M7 or SMSS
- Trader Is the individual i.e. a real person who has been authorised as a trader by the member

https://www.semopx.com/joining-the-market/how-to-join/

#### Tips for Staying Informed

- Ensure new employees subscribe to
  - <u>SEMOpx Market Messages</u>
  - <u>SEMO Market Messages</u>
- Regularly review your Traders registered with SEMOpx to ensure they receive operational market messages
  - You can request your current list of traders from <u>registration@semopx.com</u>; and request the latest S07 form for completion
- Every Friday expect the Known Issues Report to be <u>published</u>

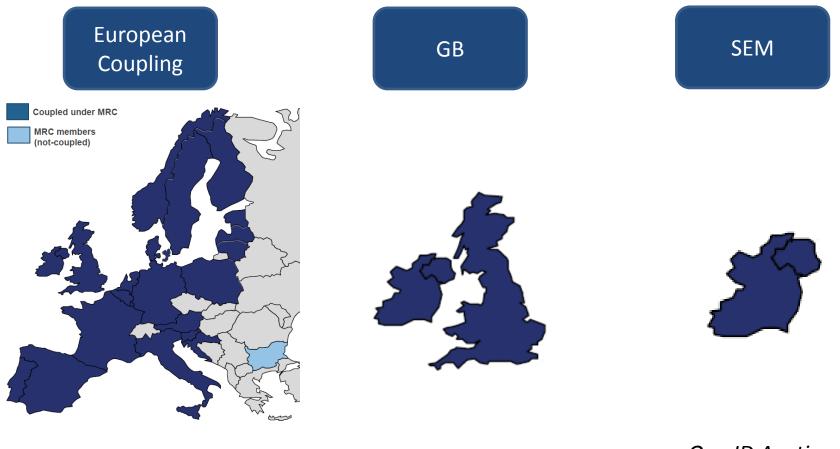

#### Agenda

- SEMOpx operation since go-live
- Service Improvements
- Helpdesk and Registration
- **D** European Integration
- □ Service Development
- **Question and Answer**

#### Day-Ahead/Intraday Markets

*Coupled in SDAC Not yet coupled in SIDC* 

Two ID Auctions

One ID Auction & ID Continuous

### Key Current Discussions/Activities

- Single Day-Ahead Coupling
  - Conclusion of agreements among NEMOs and between NEMOs and TSOs
  - Algorithm Change of Control Methodology (also applies to SIDC)
    - Methodology, not a procedure/process
    - Discussions with NRAs
    - Consultation shortly before summer
- Single Intra-Day Coupling
  - 2<sup>nd</sup> wave of countries expected September/October 2019
  - Intraday Auctions
    - Current technical work conducted by TSO and NEMOs on methodology
    - Consultation shortly before summer
- SEM-GB Regional Auctions
  - Working towards the implementation of GB MNA

### Algorithm Change Control Methodology

- Ensures Request for Change (RfCs) are managed in a nondiscriminatory way by establishing common principles
- Sets principles for submission, evaluation, decision and implementation of RfCs for SDAC/SIDC algorithm
- Such as:
  - Typology of RfC
  - Minimum information to be included in RfC
  - Timing of RfC Go-Live (approx. 1 to 1.5 years after submission)
  - Assessment of RfC based on set of criteria
  - Escalation process/Arbitration
  - Corrective measures (limitation of usage)
- ACCM discussed with ACER, shortly out for consultation

#### Agenda

- SEMOpx operation since go-live
- Service Improvements
- Helpdesk and Registration
- European Integration
- **Given Service Development**
- **Question and Answer**

### Roadmap for Market Development

Plan to be released end of May for all SEM Markets

- Project list, relevant for SEMOpx
  - EUPHEMIA MNA -Live 03/04/19
  - IDA GB MNA Go-Live for July 2019 (SEM-GB testing from June 19)
  - SEM MNA Longer term project
  - Capacity Allocation (variable NTC over day)
  - EU Coupled Continuous Market (XBID)
  - EU Coupled Auctions
  - Additional Products for both Auction and Continuous markets under consideration based on your feedback and experiences thus far after 7 months of operation

#### • Potential EUPHEMIA changes

- MIC variable component change. In R&D and potential to remove the variable component of the MIC
- Brexit uncertainty but workable plans in place to mitigate risk and provide flexibility

#### **EUPHEMIA - Order Types in SEMOpx**

## Simple Orders

- PQ pairs with no conditions attached
- Orders aggregated into hourly curve

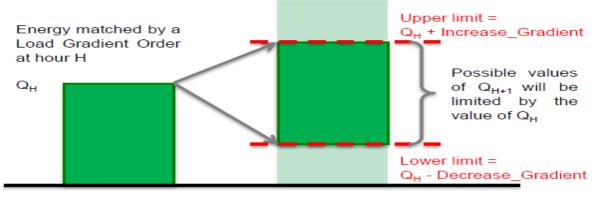

## Complex\*

- Price-quantity pairs with conditions
- Explicit representation of TOD and COD

\*Day-Ahead Market Only

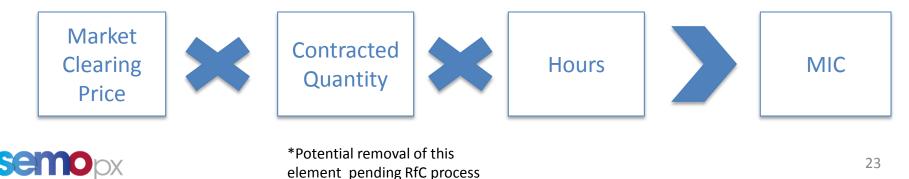

### **Complex Orders**

- Two main conditions:
  - Load gradient (above) provides an hourly average ramp limit
  - Minimum income condition (MIC below) defines minimum revenue
  - MIC has a fixed (e.g. start up) and variable\* (e.g. fuel cost) element

Based on what we know now and your feedback in the survey;

#### - 30 min Complex Order

- Part of original offering, to implement need full scope of project and testing with SEM-GB - Development of product on hold
- Complex bids in IDA (still needed or not?) Have you found ways to mitigate infeasible scheduling prior to IMB Market?

#### Block Orders in Continuous Market

 Current block products have a trade execution function with IOC, FOK and NON. Adding the AON\* execution type would not be possible without removing the NON execution type

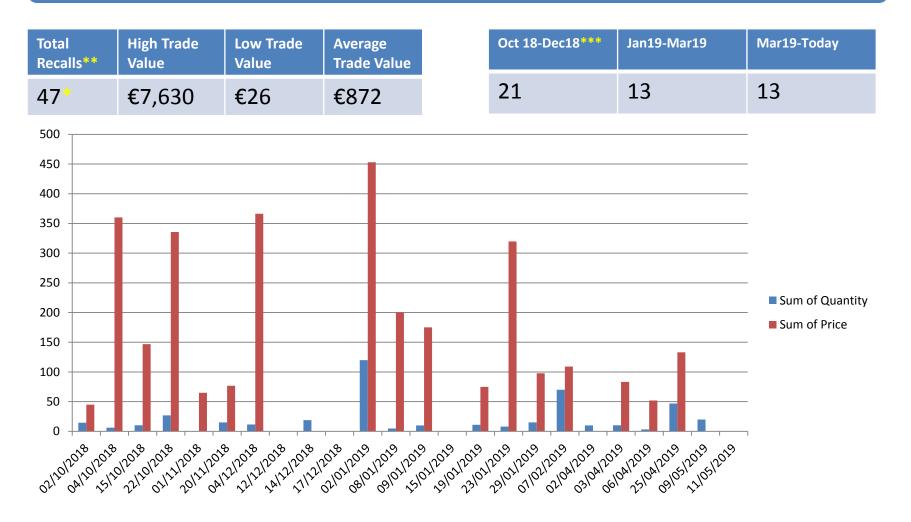

#### - Block Orders in Auctions

 Previous tests would need to be performed again, with no change to performance and additional markets being added to MRC this is highly unlikely

\*Would mean entirely new set of Block Products to be created

#### Trade Recall Trends Since Go-Live

\*15 Recalls from 1 Member \*\* 1 Recall rejected \*\*\*Automated Dec 18

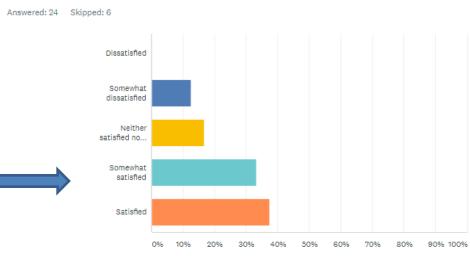

### ETS/M7 - Satisfaction

How satisfied are you with the Auctions trading system (ETS)?

Answered: 24 Skipped: 6 Dissatisfied Somewhat dissatisfied Neither satisfied no... Somewhat satisfied Satisfied 90% 100% 0% 10% 20% 30% 40% 50% 60% 70% 80% How satisfied are you with the Continuous Platform (M7)?

Multiple implementations led to some need for performance improvements and outages

### Releases

• ETS

Version	Content	Impact	Expected Timeline
V3.3.1	Functionality improvements for API services. Safety settings for order submission. Improvement of member exclusion process.	No impact on output files	End of June or beginning of July 2019 - TBC

#### • M7

Version	Content	Impact	Expected Timeline
V6.7	To be confirmed.	The TC Report XSD schema will change.	Quarter 2 2019 - TBC
